PROFILE

I have a passion for creating things. I have a degree in audio engineering, certifications in video production and design, and I'm currently pursuing a dual degree in computer science. I'm constantly learning and developing my crafts.

EXPERIENCE

Design Manager @ Recruiting.com

[February 2016 - present](#)

Initially hired as a UI/UX Designer, I worked hard and was quickly promoted to Design Manager. Job duties include: managing a team of designers and front-end developers to make sure we're doing our best work and being the best team that we can be.

Lead Full Stack Developer @ Vibrant Web

[July 2014 - August 2015](#)

Initially hired as a front-end developer, I was mistakenly given the job of creating a WordPress plugin my first week working there. When I successfully completed the task, I was moved to a full stack position and worked my way up to the lead role.

Moderator @ Treehouse

[April 2014 - March 2016](#)

As I'm constantly finding ways to learn new things, I stumbled upon Treehouse, an online platform for learning how to write code. I found myself in the forums a lot, helping other students, and Treehouse reached out and asked me to be an official Moderator for them.

Freelance Web Designer and Developer

[April 2013 - January 2016](#)

I started my career in web development working remotely for clients around the world. This gave me a feel for what it's like to manage multiple clients and their expectations.

Sound Designer & Audio Engineer @ Danetracks

[June 2012 - August 2013](#)

After obtaining my degree in audio engineering, I moved to Los Angeles and worked in West Hollywood for one of the biggest post-production houses in the business. I was fortunate enough to work on huge blockbuster movies.

Audio/Visual Intern @ SRP

[February 2010 - April 2011](#)

As an intern, I would help set up and tear down equipment, but most of my time was spent editing footage.
